A: I can think of 2 possible things you can do to troubleshoot: Check the manual for your laptop to see if it has a BIOS password or similar protection. Look in your manufacturer's support documents for your

laptop. This might be particularly useful if there is still support available for it. It could be a possible BIOS memory problem which would make it difficult to boot the OS. If that's the case, you might need to give up on restoring the system to a point where you could boot it, and restore it to a time before you bought the laptop.

Warts and Virus As with any skin condition, it's important to seek medical advice if you notice a warts. Warts may take months to years to show. A virus may not leave any sign at all. Warts may be small or large, skin coloured or pinkish. They may be flat or raised and may spread to the skin surface or travel deep into the skin. Warts can also cause discomfort if left untreated. There are many known treatments which

may cure or assist warts in their growth cycle. Read more about how to treat warts on here. Warts are caused by a virus, caused by an infection of the wart. A wart is a fleshy growth that appears on the skin, which is usually a type of human papilloma virus. The warts can grow and appear to heal but leave a mark which never really goes away. The HPV virus is thought to be spread to people through skin-to-skin contact. This includes sexual contact, close contact with someone who has active warts, and through sharing personal items, especially items which are shared for long periods of time without washing.
